

# Managed Services: Your expertise is field operations. Ours is remote communications.

Focus on your core business and leave the remote managed services to us. We provide end-to-end communications over the largest private 4G/5G LTE network in the Continental US – so you don't have to.

## Benefits of Working with INET

- Purpose-built to reach remote worksites
- Secure, reliable and robust connectivity
- Superior customer service and monitoring
- Prioritized data traffic

5051 Westheimer Rd. Sales:(832) 598-6600  
Ste. 1700, Houston, TX sales@inetlte.com

## Management of customer-owned field networks

We can help you lower costs on your privately-owned field networks by designing, building, managing and supporting them on your behalf. With the same superior customer service you get when using our private licensed LTE network.

## Alternative access technologies.

As backup or for field sites beyond our private network coverage, we provide “off-net” connectivity via public wireless carriers and satellite (VSAT). We select the best networks available to deliver the quality of service you expect to support your applications and communications needs.

## Private licensed 4G/5G LTE network.

We own and manage a 4G/5G LTE network providing over 130,000 square miles of consistent coverage over major shales basins in the lower 48. We're the foundational layer you need for a digital transformation of your oilfield or other remote operations.

## Basic communications services.

Our basic package of communications services includes voice (consumer wireless, VoIP, VoLTE), enterprise data connectivity and WiFi-enabled Internet access, all securely provided and supported over our private high-speed network.
