# Systems Integration: We design, build, operate and service private LTE networks and remote connectivity

Do you want to save money and improve focus by outsourcing operation of your owned field communications networks? If so, iNet's systems integration solutions can help you in those regards.

#### Why Use iNet for Systems Integration?

iNet provides consulting and support for CBRS spectrum and LTE Network management, in addition to offering a ready, deployable private LTE network. We do it all and make managing contractors simple. From designing, building, operating and managing, contact iNet for all systems integration needs. iNet has remote technical teams ready to support your projects.

### **Engineering and Field Infrastructure**

We custom engineer and can build your field infrastructure. If you need tower work and climbers, temporary cell-on-wheels, repeaters, rental trailers, or custom hardware and complete tower builds for your own private network, we do that and much more.

## Consulting and Network Management

iNet offers 24/7/365 Network Operations Center (NOC), site & network monitoring , IT installation and support, IP routing, field technical support, and a lot more. Call us today for customized support and solutions for your exact needs.

#### Technical Support Services

iNET offers engineering studies, site surveys, product LTE certification, complete project management, solutions engineering support, application development and testing, proof of concept design, testing and evaluation and more.
